

LastiSeal[™]

Concrete & Brick Sealer

**PERMANENTLY seals concrete,
bricks, mortar, stucco and masonry**

LastiSeal[™] is a water-based polyester polymer and polyurethane sealer, which penetrates 2-4 inches into materials, fills the pores, and hardens. It internally seals and waterproofs concrete, bricks, stucco, and masonry, reducing efflorescence, dusting, spalling, and crumbling.

LastiSeal[™] makes concrete and masonry resistant to dirt, spills, freeze-thaw damage, road salts, chemicals, acids, and acid rain. It also reduces water vapor transfer and improves the adhesion as well as life of paints (except latex), adhesives, and coatings.

COMMERCIAL & RESIDENTIAL USES:

Indoor or outdoor, new or old. Concrete slabs and walls, concrete blocks, factory floors, basements, driveways, sidewalks, colored concrete, pavers, patios, bricks and mortar, chimneys, retaining walls, stucco, limestone.

STORAGE:

Keep at 40-90°F for up to 1 year. If ever frozen, thaw and stir vigorously.

COVERAGE:

Approximately 200 sq. ft./gallon.

APPLICATION:

Let new concrete cure for at least 4 weeks. The surface must be clean and dry, above 50°F but not hot in direct sunlight. Remove old paint and efflorescence. Using a low-pressure (garden) sprayer and a roller, saturate the surface and back-roll any puddles. Extremely porous materials may need a second application the next day. Ready for foot traffic in several hours and for vehicles in 3-5 days.

SAFETY:

Non-toxic, nonflammable, zero VOCs. Not harmful to plants or grass. Splash goggles and gloves recommended.
